

Nobody knows your body better than you.

If you have any of these symptoms it might suggest a problem with your pancreas, such as pancreatic cancer.

Abdominal (tummy) pain which can spread to the back

Unexplained weight loss and loss of appetite

Jaundice (yellow skin or eyes)

Oily floating poo

Indigestion

If you have jaundice you should go to your GP without delay.

If you have any of the other symptoms and they are unexplained or persistent (lasting 4 weeks or more), visit your GP. Remember, these symptoms can be signs of other conditions and may not be pancreatic cancer.
